

ASSIGNMENT #1

Name: Muhammad Aun Anis

Roll # 24P-3017

Course: Functional English (FE)

Course Code: SS1012

Semester: 1st

Date: 26/08/2024

IMPORTANCE OF WATER

The importance of water is one that cannot be emphasized into words. Water is undoubtedly one of the most if not the most essential factor of life, not just for humans but for all lifeforms on planet Earth as a whole.

The significance of water may be justified by the fact that our own body is approximately 61% water and without it mankind would simply cease to exist. Earth is the only planet recognized by scientists to support life in the known universe and the presence of water is more than partially responsible for this fact.

Our ginormous oceans which cover approximately 71% of our planet are salient for the survival of aquatic life and not only benefit its inhabitants but also provide us with useful materials and products such as salt and medicine.

Besides being key for the survival of all species water also has some effects on today's modern world and how society functions as a whole. An example of this can be the unsanitary conditions in some parts of the world due to lack of clean water and water related sanitation services create a constant threat of concerning diseases such as cholera. It is also safe to say that without water there would be no local businesses or industries, the infrastructure would collapse.

Water is also essential to many modern professions such as firefighting, marine biology and life changing research practices all around the world. Water also plays a big role supporting our communities and infrastructure. An array of pipes, canals and pumping stations managed by our public water systems are needed to bring a reliable supply of water to our taps everyday.

Water is also responsible for the green in the world as plants and vegetation require an abundance of water for photosynthesis to survive. These plants then provide us with necessities of life such as air to breathe, in some cases food to eat (fruits, vegetables), medicine, wood for shelter and other purposes and more.

Water is a cornerstone of economic activity and development it plays a critical role in agriculture, which is primary source of sustenance and employment for billions of people worldwide. The cultivation of crops and livestock relies heavily on the irrigation systems that depends on a consistent and high supply of water. In many regions the availability of water directly impacts agricultural productivity and consequently, a reliable source of food and nutrition.

Moving into the future water scarcity has become one of the most pressing issues facing the world. Factors contributing to water scarcity include population growth which in turn increases consumption and inefficient water management because of high workload upon the ones managing it.

Water is essential for various acts and rituals on religion as well. Specifically in Islam it is used for wudu or absolution without which Muslims cannot practice a chain of rituals, duties and acts of worship such as the daily prayer or reciting the Holy Quran. In other religions like Christianity. Water is a key part of a famous ritual called baptism. In Hinduism water is associated with purification of the spirit. In Judaism water is a cleansing tool and if one shall

wash themselves with water, it returns them to a state of purity.

In today's society all aspects of the world are reliant on water in one way or another. Such normalization and common availability of water causes us humans to take it for granted. Do preserve water for future generations to come we should use it with care and take steps towards better management of water in upcoming years. Countries all around the world should come together and try to stop the ill treatment of water and water pollution. Our leaders should impose harsh consequences upon this act so that people are forced to take good care of it.

PARTS OF SPEECH

Following are the parts of speech used in the essay above:

Part Of Speech	Example used
Noun	Water, Lifeforms, Body, Planet, Oceans, World, Communities, Plants, Air, Agriculture, Crops, Livestock, Nutrition, Religion, Islam, Christianity, Judaism, Hinduism, Baptism, Worship, Society, Countries, Leaders, State
